ABOUT

I'm a 31-year-old developer. I studied biology at university but after that because of my interest in gaming, computer and technologies I started to self study web development and practiced many hours to learn front-end languages and work on different projects. In the 7 years of my development background, I always had much perseverance to make every project successful and perfect because I care about the product. I'm a fast-learner and always seeking new technologies and methods in my field to improve knowledge. Besides being only a developer, I'm a content creator in web development field and I make training videos for vuejs developers.

WORK EXPERIENCE

Front-end Developer

Sabacell

Aug 2019 - Present

- Worked in Agile-driven environment to effectively maintain project timelines and utilize available resources.
- Designed and updated layouts to meet usability and performance requirements.
- Produced websites compatible with multiple browsers.
- Developed landing pages, dashboards and web applications for products and promotions of company.
- Created reusable components using Vuejs in local package manager
- Developed designs to meet specific requirements such as quick-loading sites with particular layouts.
- Pinpointed user experience issues to devise targeted suggestions for creating cohesive user experience.
- Consulted with customers to gather requirements and discuss design choices.
- Collected, defined and translated user requirements into project designs and implementation plans.
- Analyzed requirements and designed, developed and implemented software applications for multiple websites.
- Researched new technologies and software packages to use in company projects.
- Implemented Google campaigns and SEO for various types of websites.

PRODUCT DESIGN & DEVELOPMENT

Youdonome (youdonome.com)

Web Application

May 2020 - Present

Youdonome was a MVP idea that is a wiki for twitch streamers with some cool features such as rich profiles and various quizzes challenge with their followers. I started to design application's wireframe and architecture, then developed it as a SPA with front-end only in under 60 hours. Project became viral in streamers' community in one week after release in and had about 18k unique users and 30k pageviews . So after this successful result I Started to talk with 2 of my developer friends and we started to connect our applicaion with twitch APIs. We had our authentication and other features such as sorted live streamers usign Twitch APIs.

MafiaBuzz (mafiabuzz.app)

Progressive Web Application

Jun 2019 - Present

MafiaBuzz is a game application to set up and manage the "Mafia Party Game" easily. People can set up their game and choose multiple characters as a game manager to start playing the game in a group of friends or family. I just came up with this idea at June 2019 to create a web application for who are playing "Mafia Party Game" with large groups of people and have so many troubles to run and manage the game. I have started to design application's architecture and gather a team of Game Designer, Back-end Developer and Marketing Specialist to start building the application. After 8 months of hard work we developed and released the application with all the functionality and in-game purchases to the market so people can start playing mafia game with our application. It also has been integrated to Discord for giving user an option to play online with help of Discord channels. Right now Application has average of 500 active users monthly.
